## Description

Crafted in the heart of Italy at our Bollate factory, just a few miles from Milan, the new Pirelli Scorpion™ XC line re-defines our XC performance. Designed to simplify your choice without compromising results, this complete range is made to conquer every terrain, in every condition—from World Cup races to your Sunday ride.

Developed over two years in the heat of World Cup competition by our elite sponsored teams, the all-new **Race XC Compound** delivers the perfect balance of **speed and grip**. The result? A tire that's fast, confident, and built to perform when it matters most.

The XC range is available in two high-performance casings:

- **LITE**: Superlight construction for unmatched speed and responsiveness.
- **PRO WALL**: Reinforced sidewalls for added protection and stability at low pressures.

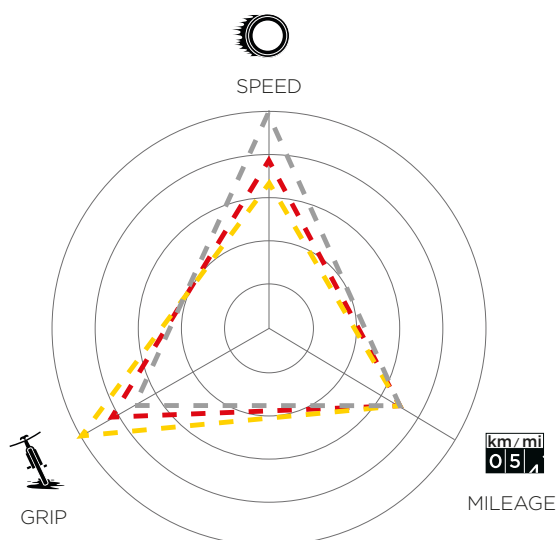

Choose from three precision-engineered tread patterns:

- **RH** - Ultra-low rolling resistance for ultimate speed on hardpack surfaces.
- **RC** - Fast-rolling and versatile, ideal for mixed terrain at race pace.
- **M** - Optimized for maximum grip on technical and looser surfaces.

## Tech Overview

### 1 COMPOUND

**RACE**  
COMPOUND

Monocompound  
for consistent race  
performance

**SPEED,  
DAMPING  
AND GRIP**

### The Race XC Compound

Developed by Pirelli technicians and crafted in the Motorsport labs, the Race Compound is the ultimate blend of speed and grip. Proven through countless test sessions, laboratory and outdoor, and through racing at the highest level — from the World Cup to the Cape Epic — it is the most performing compound in the Pirelli MTB lineup. Designed for maximum control and speed on a variety of terrains, it ensures confident, all-conditions riding. At the same time, it delivers an high level of tear resistance for enhanced puncture protection. Thanks to its single-compound construction across the entire tread area and thickness, avoiding the combined use with other less valuable rubbers, it maintains its performances consistently throughout the tyre entire lifespan, even as the tread wears off.

### 2 STRUCTURE

**LITE**

Multi-ply 120tpi Nylon  
for lightness & rolling  
performance

**LOWER  
WEIGHT &  
SUPPLENESS**

**PRO  
WALL**

### Tech Highlights

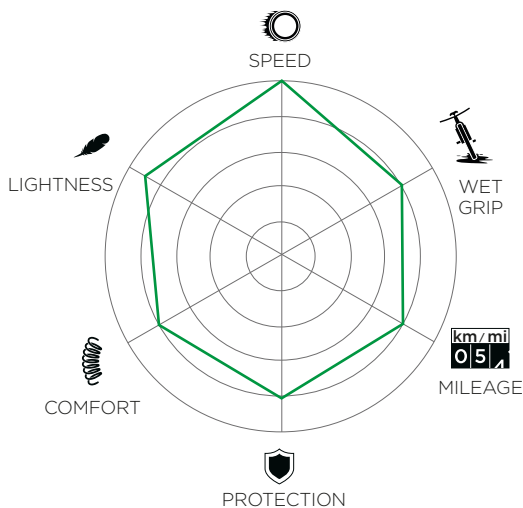

### Description

Engineered for maximum performance on fast, compact terrain, the new **Pirelli Scorpion™ XC RH** is a **racing-oriented mountain bike tyre built for pure speed**. Its low-profile, fast-rolling center tread reduces rolling resistance to a minimum, while the pronounced side knobs deliver reliable cornering grip and control on technical sections.

At the heart of the Scorpion™ XC RH is the **Race XC Compound**, a high-performance rubber blend developed from the proven experience of Pirelli's Motorsport technicians for the most demanding cycling disciplines. Specially developed for XC racing, this compound ensures ultra-responsive handling, explosive acceleration, and top-level pedaling efficiency.

Already the go-to choice for Pirelli's World Cup XC and Marathon MTB teams, this tyre is the perfect choice for those seeking every advantage in terms of rolling efficiency: **the RH model blends record rolling efficiency with the control needed to master every modern XC discipline.**

## Description

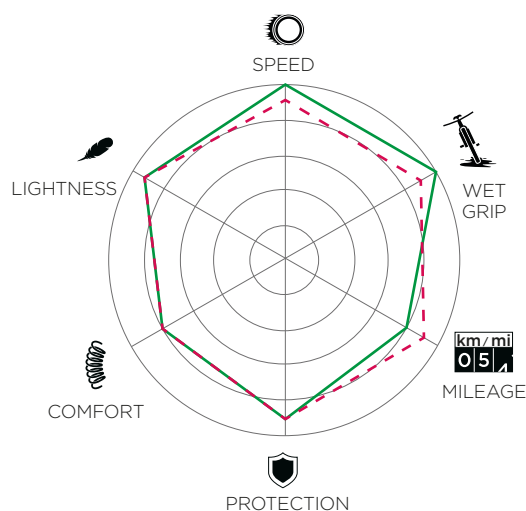

### The updated Pirelli RC - World Cup Heritage, Next-Gen Performance

The tire that was proven the World Cup is back—reborn with cutting-edge upgrades for the modern cross-country racer. The new Pirelli RC takes the iconic tread pattern trusted by champions and evolves it with more volume, a squarer profile, a brand-new compound, and an advanced casing construction. Engineered **to be 7% faster than the previous one** and built for speed and control on the mixed terrains that define today's XC racing—from man-made rock gardens to raw, natural trails—the new RC brings together **race-proven design and next-generation innovation** for total confidence and precision.

Key upgrades include:

- **Increased volume** for enhanced comfort and control at high speeds
- **Squarer profile** for improved stability and more consistent cornering
- **New Race XC compound**, delivering the ideal blend of grip and low rolling resistance
- **New casing structure**, balancing lightweight performance with robust durability

Tech Highlights

Description

### Pirelli XC M - The Modern Take on Mixed-Terrain Racing

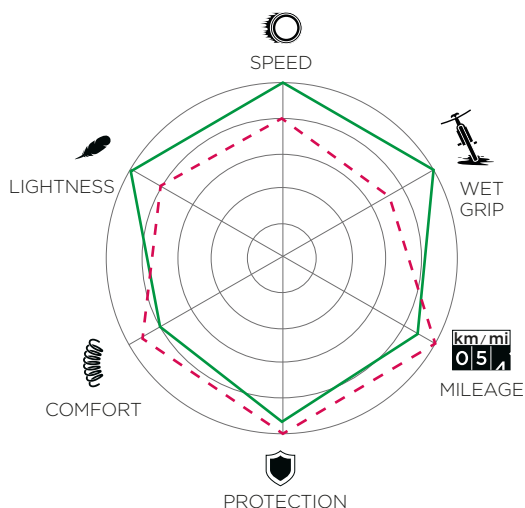

Born from World Cup experience, the new **M** is a reimagined approach to cross-country performance. Designed to strike the perfect balance between low rolling resistance and reliable grip, it's built for today's dynamic XC racing—from marathon distances to explosive XCO laps.

Thanks to the advanced **Race XC compound**, it delivers exceptional **chemical grip**, especially in wet conditions. This allows for a lower, more efficient tread design with a **compact central channel**, optimizing acceleration and rolling speed without sacrificing control.

With a medium tread height and spacing, the M is tailored for confident, fast riding across varied terrain. Whether it's natural trails or man-made obstacles, this tire adapts seamlessly, making it the **ideal choice for technical tracks**.

The new XC is 9% faster and 12% lighter than the previous one. Durable, dependable, and race-ready, the M offers **long-lasting performance** with high reliability—no matter where the trail takes you.
